**NATIONAL REGISTER OF HISTORIC PLACES
REGISTRATION FORM**

This form is for use in nominating or requesting determinations for individual properties and districts. See instructions in How to Complete the National Register of Historic Places Registration Form (National Register Bulletin 16A). Complete each item by marking "x" in the appropriate box or by entering the information requested. If any item does not apply to the property being documented, enter "N/A" for "not applicable." For functions, architectural classification, materials, and areas of significance, enter only categories and subcategories from the instructions. Place additional entries and narrative items on continuation sheets (NPS Form 10-900a). Use a typewriter, word processor, or computer, to complete all items.

1. Name of Property

8. Statement of Significance

Applicable National Register Criteria (Mark "x" in one or more boxes for the criteria qualifying the property for National Register listing)

- ☐ A Property is associated with events that have made a significant contribution to the broad patterns of our history.
- ☐ B Property is associated with the lives of persons significant in our past.
- ☒ C Property embodies the distinctive characteristics of a type, period, or method of construction or represents the work of a master, or possesses high artistic values, or represents a significant and distinguishable entity whose components lack individual distinction.
- ☐ D Property has yielded, or is likely to yield information important in prehistory or history.

Criteria Considerations (Mark "X" in all the boxes that apply.)

- ☐ A owned by a religious institution or used for religious purposes.
- ☐ B removed from its original location.
- ☐ C a birthplace or a grave.
- ☐ D a cemetery.
- ☐ E a reconstructed building, object or structure.
- ☐ F a commemorative property.
- ☐ G less than 50 years of age or achieved significance within the past 50 years.

SUMMARY DESCRIPTION:

The Boyce Historic District is located in the Town of Boyce, in south central Clarke County, Virginia. Formed in 1880 at the intersection of the newly constructed Shenandoah Valley Railroad (now part of Norfolk Southern) and the main road between the Shenandoah River and Winchester, the town was first known as Boyceville until its official incorporation as Boyce in 1910. The 102-acre historic district encompasses most of the incorporated town limits and contains a diverse collection of building types and architectural styles that tell the story of the town's development from the late 19th century to modern times. The boundaries generally include all the buildings around the intersection of US Route 340 (Greenway Avenue) and East and West Main Streets as well as Saratoga, Whiting, Virginia, and Old Chapel Avenues, East Crescent Street, and parts of West Crescent Street and Huntingdon Lane. Concentrations of non-contributing resources were not included in the boundaries.

When Boyce was created, it was not laid out on a formal grid pattern, but was instead dictated by the existing roads, the newly constructed railroad, and property lines. Most of the buildings sit on fairly uniform town lots and are sited along the road, with the exception of the more rural properties at the edges of town. Some of the properties, especially along the north side of E. Main Street, feature stone or formed concrete walls along their front property line.

Section 7 Page 4

The district contains 118 properties, the majority of which are dwellings and their associated

**United States Department of the Interior
National Park Service**

**National Register of Historic Places
Continuation Sheet**

**Boyce Historic District
Clarke County, Virginia**

outbuildings. Commercial buildings are generally located near the intersection of E. Main Street and the railroad. Four churches, three school buildings, and a train station are also included in the district. Most of the 154 contributing buildings are from ca. 1880 to 1920 and reflect the town's period of greatest growth and development. The vast majority of buildings are of the vernacular tradition, yet some fine examples of high-style architecture including the Queen Anne, Gothic Revival, Classical Revival, and Craftsman styles are also found.

Because of the railroad, Boyce became a major commercial center and shipping point for local farmers. The Winchester-Berry's Ferry Turnpike (now East and West Main Streets) was a major transportation route from the Shenandoah River to points west. During the mid-20th century, US Route 50 was constructed two miles to the south, bypassing the town and removing a lot of the vehicular traffic that once ran through it. While this may have curbed its commercial development somewhat, Boyce has continued to slowly grow in population and is now primarily a residential community. It also contains Boyce Elementary School, a bank, a post office, as well as several commercial enterprises along Main Street and Greenway Avenue. Freight trains continue to pass daily through Boyce. Much of the modern development has occurred along the edges of town in areas not included in the district boundaries. The 63 noncontributing elements in the district are primarily modest vernacular dwellings and outbuildings.

ARCHITECTURAL ANALYSIS

Boyce is an incorporated town in southern Clarke County located around the intersection of Main Street (State Route 723) and Greenway Avenue (US Route 340). The community was established in 1880 shortly after the completion of the Shenandoah Valley Railroad through Clarke County in 1879. The earliest building activity occurred at the crossing of the railroad and Winchester-Berry's Ferry Turnpike (Main Street, State Route 723) and grew westward along the Turnpike and north and south along Greenway Avenue, which at that time was the road from White Post to Berryville and originally followed Old Chapel Avenue north of Main Street.

Although Boyce was not officially established until 1910, commercial and residential activity occurred there as early as 1880. The town was first known as Boyceville and was named after Col. Upton Boyce (1832-1907), a Clarke County resident who was vice-president of the railroad and influential in determining its route through the county. The earliest buildings in Boyce were

Section 7 Page 5

located right along the tracks and were commercial ventures associated with the shipping of goods by rail. The original frame railroad station of the 1880s was replaced in the 1910s with the

United States Department of the Interior
National Park Service

National Register of Historic Places
Continuation Sheet

Boyce Historic District
Clarke County, Virginia

current masonry one. By the year of its incorporation in 1910, Boyce had grown to include a population of 312.

The architectural resources in Boyce illustrate the story of the community's development. Most buildings date to the late 19th and early 20th centuries when the town experienced its greatest growth. Beginning in 1880, properties are listed in the land tax records as being located in "Boyceville." In 1881, 11 improved lots are listed, most of which came off adjoining large estates including Saratoga and Pleasant Hill (now Scaleby). As Boyce grew, land was subdivided from three other adjoining estates: Roseville, Abbyville, and Huntingdon.

The earliest surviving resources in the district are generally located in the area around the intersection of Main Street and the railroad tracks and include dwellings as well as commercial buildings. These earliest houses are generally of the vernacular tradition, most of which are two-story, three-bay, gable-roofed, frame I-houses on stone foundations. Exterior decoration is generally limited to the 2/2-sash windows, corbeled brick chimney caps, plain friezeboard, and porch supports. Examples of these include: 14 E. Main Street (172-0001-0045); 121 E. Main Street (172-0001-0062); 135 E. Main Street (172-0001-0068). Some have central front gables decorated with arched attic windows such as at 25 E. Main Street (172-0001-0059) and 125 Saratoga Avenue (172-0001-0102).

The house at 12 E. Main Street (172-0001-0044) is also an example from this era, but appears to have been constructed in at least two sections to achieve its current three-bay configuration **(Photo 1)**. Many of these earliest residential properties still maintain some of their original outbuildings, which generally included a meat house, a chicken coop, a barn, and in a few cases, a summer kitchen. One of the most unusual outbuildings of the late 19th century in the district is the octagonal meat house at 14 East Main Street (172-0001-0045) with its conical-shaped roof **(Photo 2)**.

According to the Virginia Business Directory and Gazetteer, in 1881 Boyce had three general merchant stores, two iron works, a hotel, a meat dealer, a saddler, and a wool dealer. Although most of these buildings are no longer standing, it appears that at least two of the earliest commercial buildings in the town survive. Located directly adjacent to the east side of the railroad tracks, 118/122 E. Main Street is a very large, 2-story, frame building on a stone

Section 7 Page 6

foundation and features an intact three-part storefront as well as a bracketed first-floor cornice and front gable, decorative window surrounds, gable-end returns, and 6/6-sash windows **(Photo 3)**. This building was originally run as a store by J. N. Laws and later converted into a grain

United States Department of the Interior
National Park Service

National Register of Historic Places
Continuation Sheet

Boyce Historic District
Clarke County, Virginia

elevator and warehouse. The buildings along Railroad Lane behind it were once also associated with the grain milling business (172-0001-0101).

Directly on the other side of the tracks is 114/116 E. Main Street (172-0001-0049), which is made up of two sections: the commercial storefront along the street and an older 2-story building attached to the rear (**Photo 4**). The building is notable for the pressed tin siding on the front that is in a brick pattern and covers the tall parapet and cornice. During the 20th century, the store was known as R. C. Green & Co. General Merchants and may have originally been a store run by John W. Sprint. These two buildings sited directly along the north side of Main Street at its intersection with the railroad tracks are significant as some of the oldest surviving commercial buildings in the district. It is interesting to note that the commercial buildings from the town's earliest history feature much more architectural decoration than the dwellings of the same period, perhaps indicating a desire by the builders to make a statement about the commercial potency of the newly formed town.

Thirteen buildings in the Boyce Historic District date to the 1880s. A portrayal of the town in 1881 describes it in the following terms, "A depot, a warehouse, and shanties innumerable have sprung up all around."¹ The Clarke Courier announced in February of 1883 that, "Several lots have been sold recently in Boyceville and the purchasers intend to build on them as soon as the weather permits." Two months later the newspaper bemoaned the fact that progress wasn't being made as quickly as many had hoped and blamed it on the marital status of some of the population: "...the elite portion of Boyceville, has been again seized by the spirit of improvement,... There are many bachelors about the village, and they retard its real growth; some are on the anxious bench; however it is doubtful weather they will ever get through, so hardened have they become."²

Some of the earliest resources in Boyce are associated with its African-American citizenry. One of the first improved lots in town was on a three-acre tract owned by African-American Dennis Seals. First described as being in "Boyceville" in the 1881 land tax records, Seals is shown owning the tract as early as 1876, when it is described as "part of Saratoga." According to Everard K. Meade, a historian writing in the 1940s, Seals was a carriage driver for the Whiting family who owned Pleasant Hill (now Scaleby). It is unclear exactly where Seals's house was

Section 7 Page 7

located and whether it still stands, but the 1881 tax information has it valued at \$150. Seals later subdivided his property selling part of it to James Cooper in 1881 and part to Joseph Keeler in 1883.

United States Department of the Interior
National Park Service

National Register of Historic Places
Continuation Sheet

Boyce Historic District
Clarke County, Virginia

By 1890, nine African-Americans were listed as owning property in Boyce. Much of this property was located at the southern end of town, along the east side of the Berryville-White Post Road (current S. Greenway Avenue and US Route 340). As a testament to the growing African-American population in the immediate area, the Boyce Colored School was constructed in 1885. Located at 35 S. Greenway Avenue (172-0001-0033), this one-story, gable-end frame building is currently vacant yet still retains much of its architectural integrity (**Photo 5**). Sited directly to the north is Mount Zion Baptist Church (172-0001-0032) that sits on land deeded by R. Powell Page of Saratoga in 1890 to the trustees of the Mount Zion New School Baptist Church in order to erect a church. The current vernacular Gothic Revival-style building has a date stone of 1910 and may incorporate an earlier building.

Many of the houses along the eastern side of US Route 340 toward the southern edge of town are still associated with African-American families. Mainly ranging in date from ca. 1890 to the 1920s, all are of the vernacular and include examples of 2-story, hall-parlor-plan, and I-houses, as well as more modest 1 ½-story examples (**Photos 6 and 7**).

The buildings in the Boyce Historic District reflect the community's continued growth during the 1890s and early 1900s: eight resources were documented from ca. 1890; 32 from ca. 1900, and 20 from ca. 1910. By its incorporation in 1910, the community had a population of 312. New streets were developed including Crescent Street and Whiting Avenue. Again these came off of surrounding farms and followed long established farm lanes, as is still evidenced by their narrow width. The houses from the late 19th century were largely vernacular and conformed to the I-house, gable-end, and cross-gable forms popular in the region during this era. These are found scattered throughout the town, especially along W. and E. Crescent Street, with the few larger, more architecturally sophisticated dwellings situated along Main Street.

A typical example of a turn-of-the-century I-house in the district is 6 Whiting Avenue (172-0001-0016). This extremely well-preserved, 2-story, 3-bay, stuccoed frame dwelling sits on a stone foundation, and has 2/2-sash windows, an interior-end chimney and gable-end returns (**Photo 8**). The house at 2 W. Main (172-0001-0069) is a 2-story, 2-bay, vernacular frame dwelling of the same period but features a fine 3-bay Victorian porch with turned posts and railing and scrolled

Section 7 Page 8

arches and brackets (**Photo 9**).

Some of the larger dwellings from this time period include the house at 102 E. Main Street (172-0001-0047), a 2-story, hip-roofed, stuccoed dwelling, that was the home of John W. Sprint who

United States Department of the Interior
National Park Service

National Register of Historic Places
Continuation Sheet

Boyce Historic District
Clarke County, Virginia

ran a store and hotel in town. The large 2-story, hip-roofed house at 16 E. Main Street (172-0001-0046) was constructed by George Burwell Harrison, a bachelor who came from a locally prominent family. The house, now used as apartments, features an inset porch, overhanging eaves, and a front door with a transom and sidelights. Another large dwelling of the period is 32 Old Chapel Avenue (172-0001-0097), which was home to the Strode family during the early 20th century.

The house at 8 E. Main Street (172-0001-0043) is the town's best example of the Queen Anne style (**Photo 10**). Constructed around 1900, the 1 ½-story frame house is clad in weatherboard siding and features a projecting angled bay with a ½-story overhang, a decorative bargeboard in the front and side gables, a 2-bay integral porch with turned posts and balusters, some Queen Anne-sash-style windows, and a gable-roofed dormer with a segmental-arched window. It is remarkably well-preserved and a true landmark in the town.

The other example of the Queen Anne style in Boyce is located further east at 11 E. Main Street (172-0001-0053) and is much more subdued in decoration. The 2 ½-story, 2-bay, frame dwelling combines elements of the Queen Anne style with those from the American Renaissance style (**Photo 11**). Constructed around 1910, the house features a hipped roof, a front gable with decorative attic window, a large Queen Anne-sash window on the first floor, and a 2-bay front porch with Modern Ionic columns. The small commercial building in the front corner yard of the house (172-0001-0052) was moved to its current site from elsewhere on the property and was used to sell baked goods. It features a bracketed cornice above the storefront and wood shingle in the ½-story front gable end.

West Main Street, which was the original Winchester-Berry's Ferry Turnpike, also contains some buildings from the turn-of-the-century. Although a few commercial buildings exist, such as 8 W. Main (172-0001-0071), the majority are dwellings. Some of these include: 12 W. Main (172-0001-0072), a 1 ½-story vernacular gable-end form; 14 W. Main (172-0001-0083), a 3-bay side-passage form; 105 W. Main (172-0001-0081), a modified I-house; and 115 W. Main (172-0001-0083), a 2-story, 3-bay, gable-roofed dwelling with an enclosed front porch. The house at 121 W. Main Street (172-0001-0086) is a fairly architecturally sophisticated late-19th-century I-house

Section 7 Page 9

with interior brick flues, a central front gable, a 2-light transom and sidelights, a projecting bay on the east side, and 1-bay portico with paired Tuscan columns. Another of the town's early houses is 125 W. Main Street (172-0001-0087). The 2-story, cross-gable-roofed dwelling reflects turn-of-the-century modifications although the core of the house may date to the mid-19th

United States Department of the Interior
National Park Service

National Register of Historic Places
Continuation Sheet

Boyce Historic District
Clarke County, Virginia

century **(Photo 12)**. Located almost directly across from Abbyville, the house is the only one in the Boyce Historic District that is clad in wood shingle siding, a feature suggestive of the Shingle style.³

Construction in all parts of town continued in the early 20th century. The large store at 17 E. Main Street (172-0001-0055), historically known as Simpson's Store and later Boyce Grocery, is a 2-story, 3-bay, frame building with a façade clad in pressed tin simulating ashlar stone. Recently remodeled to resemble a Venetian palace, the building still retains many of its character-defining features including the front parapet with heavily denticulated cornice. The second floor of the building, now used as offices, once housed the town's movie theater.

One of the most notable early-20th-century buildings in the district is the former Boyce Bank (172-0001-0058) **(Photo 13)**. A 1-story, 3-bay, Greek-temple form, the Classical Revival-style brick building features a scroll bracketed door hood with transom, round-arched windows, and a 3-bay pedimented portico with Modern Ionic columns. Although now used as the Town Hall, the building still contains its exterior metal burglar alarm, barred windows, and interior safes. The small, gem-like Classical temple, constructed in 1908, lends a high-style character to E. Main Street.

At about the same time as the opening of the bank, a public high school was established in Boyce. Located along the north side of W. Main Street (outside of the district boundaries) the 2-story brick building opened on October 12, 1908, and has since been demolished. The only structure that survives from that era is a 1921, one-story, hip-roofed frame building that was built to house the agriculture and home economics curricula. Located at 101 W. Main Street (172-0001-0079), the well-preserved building was used as classrooms until the 1940s and is now used as a duplex.

Newspaper accounts of the period show that business in Boyce was "booming" by the end of the first decade of the 1900s. A proposal to incorporate the community was approved by the General Assembly on November 28, 1910. A survey made of its corporate limits, which included 232 acres, shows that much of the land in town came off of the surrounding farms of Kentmere

Section 7 **Page** 10

(originally part of Pleasant Hill), Saratoga, Huntingdon, Abbyville, and Roseville.⁴ The plat also shows the large stockyards that were once located along Roseville Run between US Route 340 and the railroad tracks.

The town's train station was to be upgraded by the railroad in the 1910s. According to

United States Department of the Interior
National Park Service

National Register of Historic Places
Continuation Sheet

Boyce Historic District
Clarke County, Virginia

newspaper accounts, the citizens of Boyce were not pleased with the plans submitted by the railway company. They wanted a larger and more ornate building, and were willing to help pay for part of the construction costs. The station that was built in 1913 was in fact a very large and ornate structure when compared to the other stations in the county, even the one in Berryville. The 1-story, rectangular building (172-0001-0061) measures roughly 135 feet in length and features a hipped roof of standing-seam metal, multiple hip-roofed dormers, deeply overhanging eaves with beaded tongue-and-groove ceiling material and wooden brackets, multi-light windows, and multiple door openings (**Photo 14**). The interior at one time contained 11 rooms including separate restrooms for black citizens, a large waiting room, telegraph office, records room, and freight room. The Clarke Courier described the building shortly after it opened and expressed the sentiments of the citizens:

“...water is now piped to the magnificent railroad station. The handsome railroad station of tile and concrete construction with its 400 feet of trains shed, and 540 feet of concrete platform, with its 3 acres of grounds and tracks, is a noble response by the officials of the railway to the requests of our people and furnishes ample railroad facilities.⁵

Located just off the east side of the railroad tracks off the south side of E. Main Street, the former train station is in need of rehabilitation. It is one of the most architecturally significant buildings in the district and represents the impact of the railroad on the creation of Boyce.

The 1910s saw the construction of three churches in Boyce. The first was Mount Zion Baptist Church (172-0001-0032), built in 1910 to serve an African-American congregation. The stuccoed building has pointed-arched windows and a central projecting entrance bay/bell tower with open belfry.

Boyce United Methodist Church was constructed in 1916 (172-0001-0091). Located at the junction of E. Crescent Street and Old Chapel Avenue, the cross-gable-roofed, stuccoed church is

Section 7 Page 11

an excellent example of the Gothic Revival style (**Photo 15**). It has an asymmetrical square entrance and bell tower topped with corner towers and an open belfry, pointed-arched stained-glass windows, a slate roof, overhanging eaves with corner brackets, and diamond-shaped wooden shingles in the gable ends.

United States Department of the Interior
National Park Service

National Register of Historic Places
Continuation Sheet

Boyce Historic District
Clarke County, Virginia

Emmanuel Chapel Episcopal Church (172-0001-0076) on W. Main Street was also constructed in 1916 and is another example of the Gothic Revival style (**Photo 16**). The gable-end stone church has a small gable-roofed entry vestibule, triple lancet windows, and an open stone belfry. While the date stone on the church indicates a 1916 construction date, the large parish hall attached to the east was constructed about a decade later. It is also of stone construction and follows the same architectural style as the church. This large building, which was constructed after a 1919 fire destroyed the original wooden parish hall, contains an auditorium and a bowling alley and was for many years considered the Boyce Community Center.

The 1919 fire that destroyed the original Episcopal parish hall also destroyed five adjacent buildings at the southwest corner of the intersection of S. Greenway Avenue and W. Main Street. In 1923, the Boyce Baptist Church at 7 W. Main Street (172-0001-0075) was built on the site of the Hotel Boyce, one of the buildings destroyed by the fire. The Classical Revival-style brick church has a gable roof with a central crossing with an octagonal peak, round-arched stained-glass windows, and a three-bay pedimented portico with Tuscan columns.

Residential construction in Boyce slowed in the second quarter of the 20th century. The population between 1920 and 1940 only grew by 41 persons, a slowdown in growth that is reflected in the architecture of the period: Thirteen resources in the district date to the 1920s, two to the 1930s, and three to the 1940s. As with earlier buildings, most are modest, vernacular forms with limited exterior decoration. The houses at 11 W. Main (172-0001-0077) and 15 W. Main (172-0001-0078) are similar in configuration and are examples of 2-story, cross-gable-roofed frame dwellings with pedimented gable ends with pent roofs. Constructed ca. 1910, they represent some of the larger dwellings constructed in Boyce during the early 20th century and demonstrate holdover design elements of the Queen Anne style. One example of a modified American Foursquare, 19 E. Main Street (172-0001-0056), was identified in the district.

Later dwellings were more modest and were often only 1 ½ stories in height. The bungalow form with Craftsman-style detailing was popular during the late 1910s and 1920s. Examples in Boyce have overhanging eaves, dormers, and full-width porches. The 1-story house at 26 Old Chapel

Section 7 **Page** 12

Avenue (172-0001-0095) features wooden square shingles with fishscale edging in the gable end, exposed rafter ends, decorative purlin ends, weatherboard siding and a 3-bay integral front porch with round stuccoed columns on rusticated concrete block piers (**Photo 17**). It is a fine example of an extremely well-preserved bungalow.

The largest Craftsman-style dwelling in the district is located at 18 S. Greenway (172-0001-

Boyce Historic District
Clarke County, Virginia

0022), and may be an example of a mail-order house. Built on a hill above the grade of the road, the 1 ½-story bungalow sits on a formed concrete block foundation and has a cross gable roof with overhanging eaves, projecting bay windows, multi-light windows, and a full-width porch with battered posts on stucco piers (**Photo 18**).

The house at 129 W. Main Street (172-0001-0088) is another fine example of a Craftsman-style house but with a Colonial Revival-style porch (**Photo 19**). Constructed ca. 1920, it has a gable roof with a large shed-roofed dormer, overhanging eaves with knee brackets, and a large brick chimney. It closely resembles a Sears mail-order house called "The Savoy."⁶ The Colonial Revival was apparently not as popular as other styles of the early 20th century in Boyce. Its use was generally limited to porch detailing.

A more modest bungalow is at 102 W. Main Street (172-0001-0074), a gable-end example with a 3-bay porch with battered columns on brick piers. Several small bungalows also exist on Virginia Avenue, and were all built by the Lanham family. These include 11, 13, and 17 Virginia Avenue (172-0001-0111, 0112, and 0114). Almost identical, all are 1-story, gable-end buildings clad in German-lap siding with full-width front porches with Tuscan columns as supports (**Photo 20**).

The railroad was not the only means of transportation that had an impact on Boyce. Two important roads in town were the Winchester-Berry's Ferry Turnpike and the White Post-Berryville Road. Early on, the town had blacksmith shops, coach and wagon makers, saddlers, and livery stables where one could rent a horse and carriage. One of these large livery stables, a gambrel-roofed frame barn on Old Chapel Avenue (172-0001-0089) still survives. As automobiles became the preferred method of transportation, gasoline stations opened in town. Although abandoned, two of these are located in the district along the north side of E. Main Street (172-0001-0041, and 0042). One operated as a Texaco station while the other, at 6 E. Main Street was a Gulf station (172-0001-0042). The small 1-story, hip-roofed, stuccoed building is typical of gas stations of that era (**Photo 21**).

Section 7 Page 13

The most significant new construction that occurred in the mid-20th century was Boyce Elementary School (172-0001-0085), located at 119 W. Main Street (**Photo 22**). Replacing the Boyce Agricultural School, which was condemned around 1940, this 1-story, Classical Revival-style brick school is an example of a typical state design for schools of this era. It features a 3-part composition with the central portion having a taller hipped roof than the 2-bay hip-roofed side wings. The recessed entry features a Classical pediment with decorative cornice and fluted

Continuation Sheet

Boyce Historic District
Clarke County, Virginia

Doric pilasters and double doors with a multi-light transom. Enlarged and renovated in the 1980s, the school is still used as a county elementary school.

In the mid-1940s, US Route 50 was constructed about two miles south of town to replace the Winchester-Berry's Ferry Turnpike, which became Route 723 (Main Street). Shortly thereafter, the White Post-Berryville Road was improved and the portion that is now Old Chapel Avenue was moved to a new location just to the northwest. This road is now US Route 340 or Greenway Avenue. These two projects had a great impact on Boyce as they diverted much of the traffic that passed through the traditional commercial center of town, forcing many businesses to close. Fortunately, the original center of Boyce is fairly well-preserved and modern construction in the district has been generally limited to the southeast corner of the intersection of Greenway Avenue and Main Street.

By the early 1950s, Boyce had assumed much of the appearance it has today except for the relatively few and unobtrusive modern buildings. Even the water tower that was erected in the mid-1970s when a new municipal water system was installed, fits into the streetscape of Boyce because it was purchased used and dates to ca. 1930. A comparison of a current view of E. Main Street with an early-20th-century view shows how little the community has changed (**Photos 23-28**). Boyce still retains the buildings that tell the story of its growth and development and make it a picturesque small Shenandoah Valley town.

Primary Resource Information: **Commercial Building, Stories 2, Style: Other, ca 1900**

This 2-story, 3-bay, store clad in pressed tin simulating stone on the facade was remodeled in the 1990s to reflect a Venetian palace. The paired windows on the second floor were retained but given lancet tops. The storefront was retained to a degree although the double-leaf door was replaced and the transoms above the bays were enclosed and covered with a shed-roofed porch. The front parapet with heavily denticulated cornice was also retained as were the side elevations. The interior of the first floor was completely reworked and reflects a Venetian palazzo.

Primary Resource Information: **Commercial Building, Stories 2, Style: Other, ca 1880**

This building is composed of two sections: the commercial storefront along E. Main Street and what appears to be an older dwelling attached to the rear. The portion fronting along E. Main Street is a wood frame structure with pressed tin siding in a brick pattern with detailing at the cornices. The gable roof is fronted by a tall parapet with a stepped bracketed cornice. The 3-part storefront is intact on the first floor and 2/2-sash windows are found on the second floor. The 3-bay front porch has modern metal poles as supports and the building has a 2-story shed-roofed side wing with garage door on first floor. The rear portion which appears to be a dwelling has a steeply-pitched standing-seam metal gable roof, a stone foundation, vinyl siding, and vinyl 1/1 windows.

8. STATEMENT OF SIGNIFICANCE:

The Boyce Historic District contains most of the historic, commercial, residential, religious, and educational buildings of the small town of Boyce, which is located in south-central Clarke County in the northern Shenandoah Valley. Established in 1880 at the intersection of the newly-constructed Shenandoah Valley Railroad (now the Norfolk Southern) and the Winchester-Berry's Ferry Turnpike, Boyce emerged as an important commercial center and shipping point for local farmers. Commercial buildings were constructed in the center of the community, and were soon followed by residential structures. By 1910, the town had grown to such a degree that it was officially incorporated. A large and commodious new depot was built as well as several new churches and a school. The town's architectural fabric represents a rich variety of building

**United States Department of the Interior
National Park Service**

**National Register of Historic Places
Continuation Sheet**

**Boyce Historic District
Clarke County, Virginia**

types and styles typical of the late 19th and early 20th centuries including the Queen Anne, Gothic Revival, Classical Revival, and Craftsman styles as well as vernacular forms.

The Boyce Historic District is eligible for inclusion on the National Register of Historic Places
Section _8_ Page __44__

under Criterion C because of its varied collection of late-19th- and early-20th-century buildings. The locally significant district possesses a high degree of integrity and its interesting history as a

Clarke County community that developed as a consequence of the arrival of the railroad in the late 1870s further enhances its significance.

HISTORICAL BACKGROUND

Boyce is an incorporated town located in southern Clarke County around the crossing of US Route 340 (Greenway Avenue) and State Route 723 (Main Street). The town developed in the early 1880s at the intersection of the newly-constructed Shenandoah Valley Railroad (now part of the Norfolk Southern) and the Winchester-Berry's Ferry Turnpike (Main Street). Like many small railroad towns in Virginia, Boyce served the local and surrounding agricultural area as a shipping, commercial, meeting, worshipping, educational, and residential center. The primary building type however, has always been the dwelling.

The land on which Boyce is situated was originally part of five large farms that still surround the town today. These include: Saratoga, the 18th-century home of Daniel Morgan located southeast of the center of Boyce; Roseville, located southwest of Boyce; Abbyville and Huntingdon, Page-family estates located northwest of Boyce; and Pleasant Hill (now part of Scaleby and Kentmere) located northeast of Boyce. The intersection of the Winchester-Berry's Ferry Turnpike and the Berryville-White Post Road was part of the landscape many years before the railroad was built through the county. The Winchester Berry's-Ferry Turnpike led from the Shenandoah River, through the village of Millwood, and on to Winchester. During the late 18th century and for most of the 19th century, Millwood was a large commercial hub with the Burwell-Morgan Mill at its center. When the new railroad was laid in Clarke County, it extended west of Millwood and a new commercial center was created at the intersection of the turnpike and the railroad which eventually developed into the town of Boyce.

When the Shenandoah Valley Railroad Company planned to build a road between Hagerstown, Maryland, and Roanoke, Virginia, Clarke County invested \$100,000 in its stock. By the early 1870s, much of the railroad in the county had been graded and prepared for the placement of

United States Department of the Interior
National Park Service

Boyce Historic District
Clarke County, Virginia

rails, but a lack of funds brought the work to an abrupt halt.¹ The project was revitalized by Col. Upton Lawrence Boyce, a St. Louis lawyer who had moved to Clarke County after the Civil War and became vice-president of the Shenandoah Valley Railroad. Col. Boyce married a niece of

Section 8 Page 45

Col. Joseph Tuley, who had built the magnificent estate known as the Tuleyries, which is located about 2 miles southeast of present-day Boyce. Much of the funding to complete the railroad came from northern capitalists and newspaper accounts of the time document the slow progress that was made. A December 11, 1879 entry notes that, "On Sunday last workmen were employed and the S. V. R. R. was completed through Clarke County. A magistrate in White Post protested against working on Sunday, but the workmen disregarded the protest."²

The stop that occurred at the intersection of the newly constructed railroad and the prominent east-west route of the Winchester-Berry's Ferry Road was known as Boyceville, named in honor of Col. Boyce. A post office soon opened as reported in the Clarke Courier in June of 1880, "A new post office has been established at Boyceville, in this county, between Berryville and Millwood, with Thomas H. Sprint as postmaster. It is known as Boyce."³

Businesses quickly began to appear around the crossing. The 1880/1881 Virginia Business Directory and Gazetteer lists three general merchandise stores, a hotel, and several other commercial enterprises that operated in Boyce. By the mid-1880s, the town added two attorneys, a sawmill, a saddler, and a physician to its list of businesses.

In 1890, historian J. E. Norris described Boyce's impressive growth: "Boyce is quite a thriving village, and is growing more rapidly than any town in the county. It is at the crossing of the Shenandoah Valley Railroad and the Millwood Turnpike from Winchester. Several fine businesses are conducted here, and church and school facilities are increasing."⁴

Before the arrival of the Shenandoah Valley Railroad to Clarke, local farmers had to take their goods to areas outside of the county, such as Winchester, in order to ship them to market. Boyce became a hub of commercial activity with several grain elevators and stockyards. The newspaper reported a large cattle sale in 1883, "Messrs Russell & Moss unloaded 650 cattle at Boyce—300 of them were taken by Mr. Griffith, of Washington County...the remainder, I understand, belong to Henry Gibson of Loudoun."⁵ Chickens were also loaded in Boyce: "Four tons of poultry were shipped from Boyceville during the month of December, commanding on average 15 cents per pound or aggregating \$1200."⁶ In 1908 the Eidison & Gibson Livestock Company was formed on part of the Roseville farm and stockyards were set up along Roseville Run at the south end of town.

Business in Boyce by the early 20th century was doing so well that a bank was established along
Section _8_ Page __46__

E. Main Street near the railroad tracks (172-0001-0058). The Classical Revival-style brick bank was opened on March 10, 1908, and the newspaper described its secure features, "The Boyce State Bank is located in a handsome home. Its equipment is modern in all respects, one of the features being a burglar-proof safe, circular in shape, which is of the latest approved banker's design."⁷ When the bank finally moved from the building in the 1980s, it had been robbed seven times.

In addition to commercial buildings, dwellings were also being constructed in town. The land around the crossing of the railroad tracks with Main Street developed and continued northwest to the intersection with the Berryville-White Post road. In addition, an African-American neighborhood formed at the southern end of town on land that was deeded from Saratoga, which was owned by R. Powell Page during the late 19th century. As early as 1876, Dennis Seals, an African-American, is shown on the land tax records as owning three acres described as "part of Saratoga." Four years later, the same tract is described as being in Boyceville. In 1885, an African-American public school opened along S. Greenway Avenue (172-0001-0033). Next door was the Mount Zion Baptist Church (172-0001-0032), sited on land deeded to the trustees of the church in 1890 by R. Powell Page.

In 1908 the Boyce High School opened. The multi-story brick building was later known as Boyce Agricultural School and was eventually demolished. Boyce Elementary School (172-0001-0085) was built in 1942 across W. Main Street from the original school. It is a fine example of a state-sponsored Classical Revival-style brick school of the era and is still in use today.

By the end of the first decade of the 20th century, Boyce was so well established that it became officially incorporated on November 28, 1910. Newspaper accounts of the period boasted of the town's development and supported its desire to become independent. One particularly poignant column appeared about a month after the incorporation.

Boyce

Nestled in the Valley, there's a bud
about to bloom,

'Tis a hustling little hamlet that's
asking us for room.

We gladly grant the favor, for we see

it is but just
For it's pushing to the forefront while
Section 8 Page 47

neighbors go to rust.
It's men are full of business, faithful,
brave and free,
It's women famed for beauty which
pleaseth you and me.
For the smile of lovely women when
she's noble, good and true
Doth often make a city, and it makes
the county, too.
So we wish you all prosperity and
With you rejoice
And dub this budding rosebud the City of Old Boyce.⁸

The incorporated town limits included 232 acres with a population of 312. The plat that accompanied the deed showed that much of the land came off of five surrounding farms, most of which are still fairly intact today.

The citizens of Boyce and the surrounding area were certainly proud of their town. When the railroad wanted to upgrade the frame train station in the early 1910s, the locals were dissatisfied with the design presented by the railroad. According to one newspaper article, the people of Boyce wanted a more "pretentious" station. They were able to secure a better site, this time along the east side of the tracks and off the south side of E. Main Street, and are reputed to have donated funds for the construction of an improved station.⁹ The Boyce Train Station (172-0001-0061) that was completed in 1913 was a truly modern structure not only in its fireproofing construction but in the fact that it had running water and electricity.

By the mid-1910s, three churches were erected in Boyce. These included a Baptist church for an African-American congregation (172-0001-0032), and Episcopal (172-0001-0076) and Methodist (172-0001-0091) churches. In 1923 a Baptist church (172-0001-0075) was constructed on the site of the former Boyce Hotel, which had burned in a 1919 fire.

An accurate description of the town is provided in a 1925 economic and social survey of Clarke County:

**United States Department of the Interior
National Park Service**

**National Register of Historic Places
Continuation Sheet**

**Boyce Historic District
Clarke County, Virginia**

Section _8_ Page _48_

Boyce was incorporated in 1910, at which time it had a population of 312, eleven more inhabitants than it had in 1920. While the population has failed to show an increase in number, yet the town itself has grown in business volume, and in the development of the conveniences of life. It has paved its principal streets and established a public fire department with piped water through its streets. In addition to the public well, which from a depth of 165 feet furnishes water so cold that no ice is needed with it, the town also owns an electric plant with a 90 kilowatt dynamo of alternating current.

In addition to these the town has a splendid railroad station, which would be a credit to much larger towns; three new churches of modern design- Episcopal, Methodist, and Baptist- connected with the Episcopal Church is a parish hall, fully equipped with library, reading rooms, auditorium, etc., the whole plan costing about \$40,000; a high school with nine teachers and an enrollment of about 200 scholars; a bank; the plant of the Clarke County Farmers' association, doing an annual business of over \$65,000; two grain elevators; drug store; a number of other stores carrying an up-to-date line of merchandise; a garage; lunch room; and butcher, barber and shoe shops.¹⁰

Boyce flourished in the late 19th and early 20th centuries, but its growth slowed by the mid-20th century as passenger and freight rail service ceased. In addition, the town was bypassed when current US Route 50 (John Mosby Highway) was constructed two miles to the south replacing Main Street as the main road to Winchester, and US Route 340 was realigned. The drop in traffic through the oldest commercial portion of Boyce led to a decline in commercial growth, yet at the same time helped to preserve many of its architectural resources. Since the 1950s, Boyce has served primarily as a residential center, although it still has four active churches, a school, and several commercial ventures along both Main Street and Greenway Avenue. It is a well-preserved, small, incorporated Shenandoah Valley town that has maintained much of its late-19th- and early-20th-century character. Although no longer stopping at Boyce, the train still passes through the town with great frequency and is a reminder of the source of the community's development.

VERBAL BOUNDARY DESCRIPTION:

The boundaries of the nominated Boyce Historic District are delineated by the polygon whose vertices are marked by the following UTM reference points: A, 17 753882E 4330521N; B, 17 753542E 4331212N; C, 17 753633E 4331410N; D, 17 754202E 4331354N; E, 17 754842E 4331283N; F, 17 754903E 4331243N; G, 17 754791E 4331029N; and H, 17 754477E 4330760N.

BOUNDARY JUSTIFICATION:

The Boyce Historic District boundaries were drawn to include the largest concentration of historic buildings in the town of Boyce along E. and W. Main Streets, E. and W. Crescent Streets, Old Chapel Avenue; Whiting Avenue; N. and S. Greenway Avenues, Railroad Lane, Saratoga Avenue, and Virginia Avenue. District boundaries coincide with property lines whenever possible. Concentrations of noncontributing buildings were excluded where possible.
